SUMMARY

Currently working as Software Engineer

Software Engineer with a background & strong understanding of visual design principles, who focuses on creating beautiful and engaging products to promote positive and delight. I employ a combination of research, empathy, and creativity to tell engaging stories and design meaningful solutions for users. I strive to act as a catalyst toward an easier and better-functioning world.

WORK EXPERIENCE

Software Engineer
Shell India Markets Private Limited

08/2016 – Till now,   *Bangalore, India*

Working in project **Shell Market Hub** *which is Shell's Primary B2B eCommerce platform. It handles a wide range of interactions including distribution of Marketing materials, order management, document delivery. It is a vital component of our Offer to Cash offering and is a key tool in communicating our brand identity.*

Tasks:

- Liaison with the UX-designer and business stakeholders in evaluating feasibility of User Interface components and performance.
- Identify product risks and proactively take appropriate actions to mitigate its effect.
- Developed multiple modules in **B2B Hybris** product ordering & financial workspace
- Work closely with Dev-Ops, Systems, and QA teams to modernize front end developer tooling and pipelines, including automated code quality checks, peer code review tooling, and compliance best practices, performance and stability monitoring
- Identify and ensure the effective application of the latest technologies and approaches to Security and Compliance, web performance, accessibility, and modern tool sets.

Software Engineer
Razorfish

05/2009 - 05/2016,   *Bangalore, India*

Razorfish Technologies India (Neev technologies) is a technology services provider specializing in e-commerce, SaaS (Software as a Service) and cloud applications across web, social media and mobile space. It enables companies to design, develop and deploy apps on the cloud, which can be then accessed via web and mobile.
Role and Responsibility:

- Created User Interface features using **JavaScript, jQuery, HTML5, CSS3** for the web application in an **Agile** scrum team.
- Worked with the UI designers in implementing responsive design using **Flexbox** and the **SASS** preprocessor as well as identify and fix defects within the testing and production environments if present.
- Contributed to peer **code reviews** where possible.
- Used **Agile Manager** to create and monitor user stories and engage with the Product Owner, Scrum Master and Business Analysts daily to deliver functionality that meets the customer needs every **sprint**.
- Used **GIT** for version control, supported the build & **deployment** tasks using **Jenkins**

Divante, Official SAP Training Partner

Frontend web development with React
(08/2019 - Present) *Coursera,*

RECENT PROJECTS

Software Engineer
Shell Markethub.

Bangalore, India,

Shell Market Hub is Shell's Primary B2B eCommerce platform. It handles a wide range of interactions including distribution of Marketing materials, order management, document delivery. It is a vital component of our Offer to Cash offering and is a key tool in communicating our brand identity.

Role and Responsibility:

- Oversee the technical architecture, development, and maintenance of core foundational frontend technology across [Hybris, Adobe CQ].
- Used **JavaScript(ES6) & ReactJs** to write and extensively debug the flex app, adhering to paychex linting standards, error framework and component frameworks such as P.N.G.
- Implemented **responsive design** for mobile devices using custom media queries.
- Monitored **bindings** of the reactJs app by runnings scripts to ensure any enhancements made to up to the standard. Implemented using one-time and **one-way bindings** where possible.
- Used **JIRA** to monitor stories and defects and communicate with UX and testers to adhere to acceptable criteria for all tasks.
- Used **jUnit for** development to test for javascript and **Reactjs** components.
- Used **GIT** for version control and bitbucket to participate in rigorous **peer code reviews.**

Front-end Developer
Dmart- Online Grocery shopping

Bangalore, India,

It is online selling E-commerce website (based on Hybris E-commerce) for Home Appliances. Luggage. Footwear. Kids Apparel. Ladies Garments. Apparel for Men. Home & Personal Care. Daily Essentials. Grocery & Staples.

Role and Responsibility:

- Created reusable User Interface components using **HTML5, CSS3, ReactJs** based on **Zeplin wireframes**
- Used **JavaScript** to perform DOM navigation and manipulations in addition to simple animations.
- Designed the web page making extensive use of the **SASS** pre-processor to create modular resusable mixins for application-wide use.
- Used Media Queries for **Responsive** Web Design, to achieve cross-platform compatibility
- Responsible for creating functionalities to be used in common services all across the UI component using **JavaScript** primarily to perform DOM manipulations
- Used **JIRA** for task management, and collaboration with **QA** teams
- Used **GIT** for version control to track changes to multiple code repositories

Front-end Angular Developer
Medicine Express

Bangalore, India,

It is India's premier market place where users can buy medicines online and healthcare products online from a wide range of categories such as prescription medicine, over the counter medicine (OTC medicine), Ayurvedic medicine, homeopathic medicine, motherhood and pregnancy care products, women health products , baby care products and other health and wellness products

Tasks:

- Built custom **Modules** using both-isolated and inherited scopes, to refactor existing codebase and perform simple **DOM** manipulations using link function
- Enhanced performance of the Application by limiting number of data bindings well under 2000, better one-time binding syntax, using digest appropriately, and avoiding **Local DOM** where possible
- Utilized **dependency injection** using existing and custom services or custom factories
- **Refactored** existing codebase by utilizing databinding and Involved in solving /helping support team in order to determine root cause of production issues (tickets).
